FOUR-FOLD DOOR PASSES HIGH VELOCITY HURRICANE ZONE TESTING

Door Engineering and Manufacturing's Four-Fold Door System has passed testing requirements for use in High Velocity Hurricane Zones. The testing covers Miami/Dade County and Broward County in addition to the entire state of Florida. Our FF700 Hurricane-Rated Four-Fold Doors can be constructed up to 16' wide and 17' tall and include up to two rows of windows as large as 24" wide by 60" tall. The FF700 is rated for up to 65psf design pressure. The test protocol also included Large-Missile Impact testing. Contact us today for your hurricane door application in Florida or anywhere your facility will be susceptible high winds.
